

About Me

I am a fourth-year Computer Engineering student at Istanbul Topkapi University and I reside in Istanbul. Throughout my education, I have actively participated in various individual and team projects, developing both my technical knowledge and my teamwork skills. I aim to continuously improve my problem-solving, analytical thinking, and project development solutions. I also actively attend software and networking conferences, keeping up with industry developments at regular intervals. I aim to specialize in artificial intelligence, one of the most important disciplines of the future, and to improve my progress in this field.

Skills

- Kotlin
- Flutter
- React
- Python
- Java
- JavaScript
- N8N

Languages

- Turkish
- English B2

MERT DEMİRCİ

Computer Engineer (English)

Education

(2022 - 2027)

ISTANBUL TOPKAPI UNIVERSITY

Computer Engineering

3.43

Certificates

JAVA PROGRAMMING

BTK Akademi

- I learned the Java programming language from the ground up, from a real-world application development perspective.
- I was able to effectively use object-oriented programming principles (OOP).
- I was able to apply SOLID principles in software development practices.
- I gained a basic understanding of Design Patterns.
- I was introduced to Java's components such as database access and a simple GUI (Swing).

ADVANCED MOBILE PROGRAMMING WITH KOTLIN

BTK Akademi

- Applied advanced techniques in Android mobile application development using Kotlin.
- Implemented object-oriented programming and modular architecture effectively in real projects.
- Integrated RESTful APIs, managed local and remote data workflows, and utilized external libraries.
- Performed debugging, performance optimization, and prepared applications for deployment.

RNN (RECURRENT NEURAL NETWORKS)

BTK Akademi

- Gained practical experience with Recurrent Neural Networks including advanced architectures such as GRU, BRNN and deep RNN.
- Applied sequence modeling techniques for time-series and text data preprocessing, training and optimization.
- Developed the ability to evaluate and improve sequential deep learning models.

ROTARY WING UAV DEVELOPMENT COURSE (MAVSDK-PYTHON AND JMAVSIM)

BTK Akademi

- Developed autonomous flight control software using MAVSDK and Python in a simulation environment.
- Gained hands-on experience with UAV system architecture, control dynamics, and simulation-based testing.
- Performed UAV calibration, command transmission, and flight telemetry analysis.

INTRODUCTION TO DEEP LEARNING

BTK Akademi

- Built theoretical understanding of deep learning fundamentals, including neural networks, backpropagation, and optimization.
- Implemented convolutional (CNN), recurrent (RNN/LSTM), and generative deep learning models using Python and Keras/TensorFlow.
- Gained hands-on experience in model design, training, evaluation, and performance tuning on real datasets.
